SUMMARY

Final-year (4th-year) Computer Engineering student currently studying at **WSB University (Poland)** via the Erasmus+ Exchange Program. Experienced in building cross-platform mobile applications with **Flutter, Dart, and Firebase**, and developing local generative AI video workflows in **Python (PyTorch, ComfyUI, ControlNet, AnimateDiff)**. Founder of an independent studio with a mobile title published on the Google Play Store and hands-on experience in C++/Unreal Engine 5 and Unity game development. Seeking remote Software, Mobile, or Applied AI roles.

TECHNICAL SKILLS

Mobile & Frontend: Flutter, Dart, Provider (State Management), Material Design, HTML5 Canvas, CSS3, Tailwind CSS, JavaScript
AI & Computer Vision: Python, PyTorch (CUDA), ComfyUI Workflows, AnimateDiff, ControlNet (Lineart/Depth), Local Diffusion Pipelines
Programming & Game Engines: Dart, Python, Java, C++, C#, JavaScript, x86 Assembly, Unreal Engine 5.3 (Blueprints/C++), Unity
Backend, Cloud & Tools: Firebase (Auth, Cloud Firestore, Storage, FCM), MS SQL Server (MSSQL), Git, GitHub Pages, SharedPreferences

EXPERIENCE

Founder & Independent Mobile / Game Developer — YOM Games (yomgames.com.tr) — Jan 2026 – Present

- Designed, developed, and published **Rhythm Box** (Google Play Store) using **Flutter** and **Firebase**, building a custom audio-rhythm timing loop, theme customization system, and cloud-backed player data storage.
- Managed the end-to-end Google Play Console release lifecycle (signed Android App Bundles, store listing compliance, and closed testing tracks).
- Built and deployed the studio's bilingual (EN/TR) web platform (yomgames.com.tr) with Tailwind CSS and asynchronous JavaScript contact/newsletter forms.

Mobile Application Development Intern — Talos Yazılım (Istanbul, Turkey) — Jun 2026 – Jul 2026

- Practiced mobile UI component design, responsive layout structuring, and screen transition animations within the mobile development workflow.
- Used debugging and inspection tools to identify UI rendering and state issues during undergraduate summer internship training.

ENGINEERING PROJECTS

AnimeAI Studio — Video-to-Video AI Engine | Python, PyTorch, ComfyUI, AnimateDiff, ControlNet, JS — github.com/Samrili/animeai

- Built a dual-workspace local generative AI application pairing a **ComfyUI** backend (*AnimateDiff*, *ControlNet Lineart/Depth*, *ToonYou*) with a custom bilingual web interface (*RingPulse AI Studio*) for video-to-anime synthesis and automated combat poster generation.
- Developed an interactive **HTML5 Canvas region-protection masking tool** allowing users to paint brush/rectangle masks that preserve facial details, brand logos, and text during diffusion inference.
- Created a hardware-aware launcher (`smart_launcher.py`) and automated model downloader (`download_models.py`) that detect GPU VRAM capacity (4GB to 24GB+) and set runtime flags (`--lowvram`, `--highvram`) to prevent CUDA Out-Of-Memory crashes.

AvukatBul — Legal Consultation Mobile App | Flutter, Dart, Provider, Firebase (Auth, Firestore, FCM, Storage) — github.com/Samrili/AvukatBul

- Developed a role-based (Client & Lawyer) cross-platform mobile application in **Flutter** using `Provider` state management, custom Firestore security rules (`firestore.rules`), and a modular service/model architecture.
- Implemented city and specialty-based lawyer filtering across 81 provinces, real-time 1-on-1 chat messaging, consultation package CRUD management, case tracking, and user rating workflows backed by **Cloud Firestore**.
- Integrated **Firebase Authentication** (Email & Google Sign-In), profile media uploads via **Firebase Storage**, and push notifications using **Firebase Cloud Messaging (FCM)** and `flutter_local_notifications`.

Tall Enough — Co-op Multiplayer RTS Extension | Unreal Engine 5.3, Blueprints, C++, Steam SDK — github.com/Samrili/Tall_Enough

- Extended Unreal Engine 5.3's *Cropout* multiplayer sample architecture in a 2-person team to build a cooperative island strategy game with Steam session hosting/joining.
- Implemented a custom interactive blacksmith upgrade system, game-speed acceleration controls, end-game UI screens (`UI_EndGame`), localization support, and animation adjustments.

K.A.R.M.A — 2D 1-Bit Platformer (5th Place, 2026 Karadeniz Game Jam) | Unity, C# — 2026 Karadeniz Game Jam

- Co-developed a complete 2D 1-bit platformer from scratch within a strict 48-hour deadline in a 2-person team, placing **5th overall** among competing teams.

EDUCATION

WSB University (Akademia WSB) — Sosnowiec, Poland — Jul 2026 – Present
B.Sc. in Computer Engineering — Erasmus+ International Exchange Program (4th Year / Senior)

Ardahan University — Ardahan, Turkey — Jun 2023 – Expected Jun 2027
B.Sc. in Computer Engineering (4th Year / Final-Year Undergraduate) • ***GPA: 2.94 / 4.00***

CERTIFICATIONS & LANGUAGES

Certifications: Networking Basics (May 2026) — TCP/IP protocol suite, routing fundamentals, and OSI reference model architecture.
Languages: Turkish (Native / C2) • English (Professional Working / B2–C1) • Japanese (Elementary / A2) • Polish (Beginner / A1)

I hereby give consent for my personal data included in my application to be processed for the purposes of the recruitment process in accordance with Regulation (EU) 2016/679 of the European Parliament and of the Council of 27 April 2016 (GDPR).
